PROJECTS

TRAKMAMA USING REACT

.A website platform for expectant mothers and new parents to track maternal and child health indicators, receive personalized guidance, and schedule appointments. This app also helps conceiving mothers stay healthy from the start to childbirth. Providing daily reminders, healthy tips, and motivations at offline use. Help to connect pregnant women to share experiences. Enlighten potential mothers about healthy pregnancy, proneness to some conditions such as preeclampsia, diabetes, postpartum, and hypertension

Project link

QUIZ APP WITH REACT

.An interactive quiz application built with React, Context API, and useReducer for state management. It tracks user progress, provides instant feedback, and features a responsive UI for a seamless experience.

Project link

Frontend developer (Wellahealth)
August 2024 - present

- Developed and implemented responsive user interfaces for healthcare fintech applications using React, TypeScript, and Bootstrap.
- Collaborated with cross-functional teams to enhance user experience, ensuring accessibility and mobile responsiveness across various devices.
- Optimized application performance by identifying and resolving UI bugs, reducing load time, and improving efficiency.
- Integrated APIs to display real-time data, enabling better user interaction and seamless navigation within the application.

WORK EXPERIENCE

Data Analyst(Acess bank)
April 2023 - Jan 2024

- Analyzed and visualized data for over 70,000 terminals in different states across Nigeria.
- Utilized Excel to clean, manipulate, and analyze terminal data to track business performance
- Communicated findings and recommendations to stakeholders, resulting in improved decision-making and increased revenue.
